## GLASS & CONCRETE CONTRACTING

*The Old Chamber of Commerce Greenville, SC*

## HISTORICAL RESTORATION

*"Providing our clients with a means to return a property to a state of utility, through repair or alteration, while preserving those portions and features of the property which are significant to it's historic, cultural, and architectural values."*

## Structural and Facial Repairs

**T**ime and weather take a mean toll on exterior substrates, and create a two fold problem: a deteriorating exterior structure loses much of its aesthetic charm while at the same time inviting higher maintenance costs. Deteriorating masonry provides a breeding ground for other serious problems such as water intrusion, structural damage and rapid destruction of surrounding masonry due to elemental damage and freeze thaw cycles. Historic buildings are most susceptible. Treating problems when they are small saves on future maintenance costs and prevents further damage.

## Restoration

**T**he bulk of our nations infrastructure was built during an emerging glass and concrete technology. Decades later, we are faced with solving the often complex problems of repairing and restoring aging structures. We are a company composed of resourceful and experienced journeymen, with the broad knowledge base derived from working on modest two story buildings to high-rise office towers and historic landmarks across the southeast. We combine our knowledge and experience with the insight gained from listening to our client's needs to develop a system and schedule specially tailored to each building and each owner's needs.

## Vertical Access

**E**conomical access in today's vertical workplace can often be hard to find. *Glass & Concrete Contracting* focuses on independent mobile access systems such as Sky Genie seats and swinging stages to get the job done, while many competitors still rely on the traditional scaffold and walk board system. Our vertical access systems allow us to provide substantial reductions in contract prices, time frames and barricade issues. With this comes the peace of mind that the project will be perfected safely and efficiently.

Our goal is to preserve the long-term significance of our nation's skyline for the future enjoyment of everyone. We are wholly committed to this practice and hope to share our love of architecture with our clients.
